Saskatoon and District Chamber of Commerce

2003 CANADIAN ECONOMIC OUTLOOK

- a Saskatoon perspective

The Saskatoon and District Chamber of Commerce suggests that the local economy is expected to perform at or above the Canadian average for 2003, driven by ongoing developments at the University of Saskatchewan relating to the Canadian Light Source, ongoing housing and retail strength, as well as a recovering agricultural sector, according to Executive Director, Kent Smith-Windsor.

"In addition to strengthening markets for our products, provincial and federal income tax cuts, as well as resource royalty rate changes, bode well for increased economic activity in the Saskatoon region," stated Smith-Windsor. *"In comparing Saskatoon's expected performance to that of the rest of Canada, we're expecting a solid year,"* Smith-Windsor continued.

In its recently released 2003 Economic Outlook, the Canadian Chamber of Commerce forecasts another good year for the Canadian economy. For 2003 as a whole, growth in real gross domestic product (GDP) is expected to average around 3.2 percent, close to the estimated 3.3 percent rate for 2002 and a big improvement over the 1.5 percent growth rate recorded in 2001.

"We expect that the Canadian economy will continue to lead the G-7 economies in terms of growth in the coming year," stated Nancy Hughes Anthony, President and CEO of the Canadian Chamber of Commerce. *"Along with strong business and consumer confidence, there are other indicators for good economic growth in 2003."*

and rising capacity utilization rates bodes well for a revival in business investment in productivity-enhancing machinery and equipment.

- ◆ As well, exports will continue to benefit from firmer economic growth in the United States.

In terms of interest rates, the Canadian Chamber expects the Bank of Canada to keep interest rates steady until the spring of 2003, and it is projecting rates to rise by 125 basis points by the end of 2003. The projected widening in Canada-U.S. interest rate spreads will also lend support to the Canadian dollar. By the end of 2003, the Canadian dollar is expected to appreciate to 67 U.S. cents.

"There are risks to our forecast such as a delay in the economic recovery in the United States, possible military action against Iraq and the lingering uncertainty around the cost of the Kyoto protocol," continued Hughes Anthony. *"Concern about these risks is clouding the outlook for the Canadian economy in 2003."*

- ◆ The Canadian Chamber expects that while consumer spending on durable goods is expected to slow, expenditures in other areas, including services, will pick up most of the slack.
- ◆ In addition, a continued improvement in corporate profits

**A VIEW FROM OUR
PRESIDENT**
Lester Lafond

As we are approaching the end of my term as President, we reflect over the past year's activities. The Chamber has brought interest and has shown me the value it provides to the business and community at large.

As the Saskatoon and District Chamber of Commerce we are suggesting that the local economy is expected to perform at or above the Canadian average for 2003. This is driven by activities related to the Canadian Light Source, ongoing housing and retail strength, as well as a recovering agricultural sector, and the continued tax reductions by the Federal & Provincial governments. The addition of the resource royalty rate changes bodes well for increased economic activity for the Saskatoon region.

The Canadian Chamber is saying that along with strong business and consumer confidence, there are other indicators for economic growth in 2003.

- While consumer spending on durable goods is expected to slow, expenditures in other areas, including services will pick up most of the slack.
- In addition, a continued improvement in corporate profits and raising capacity utilization rates bodes well for a revival in business investment in productivity-enhancing machinery and equipment.
- As well, exports will continue to benefit from firmer economic growth in the United States.

The Canadian Chamber indicates there are risks to the forecast such as a delay in the economic recovery in the United States, possible military action against Iraq and the lingering uncertainty around the cost of the Kyoto protocol.

We are a people with an almost unlimited level of optimism and will continue to have highs and lows but we always seek success for our businesses and strength for all our community residents.

As your President I would like to extend to all of our committees Chairs and their membership a 'thank you' for all their thought and effort to make Saskatoon and District the best business climate in Canada. I extend my personal thank you to our local partnerships, and gratitude for making Saskatoon a great place to live and work.

We must always be diligent and grateful for what the city of Saskatoon presents to all of us. It has been an honour to be your President. As always Saskatoon Shines.

**REMEDIES FOR CANADA'S
AGRICULTURAL HEART**

**Food for Thought -
Knowledge Based Farming**

by C.M. (Red) Williams, PAg

There was a time perhaps two decades ago, that I used to point out that the real managers in farming were at the lab benches and design shops of the companies providing the new equipment and chemicals that were turning farm management around. You will remember that the important rural meetings were sponsored and usually staffed by company representatives. That was then, and I believe it was a reasonable observation.

We are moving ahead at a dizzying pace however, and just being willing to get a new product and follow faithfully the directions on the label are not good enough. The difficulty is that the application of the critical new management tools is much beyond following a set of instructions. There are decision points where the individual manager will determine the yes or no to a product's use. For example: the application of a pre- or post-emergent spray, the level of application of livestock manure, the decision to approach overseas importers, or planning for the day that supply management is eliminated. These decisions are complex, fraught with risks, and based on technical information that is enlarging day-by-day.

C.M. (Red) Williams

The solution, as I see it, is to make the connect between the expert and the manager as direct as possible. That implies, usually incorrectly, that the expert can interpret his or her technology for the farmer and the farmer has kept sufficiently up to date on chemistry, physiology or business management. There is an awesome gap to fill. The lab results must be interpreted and the managers need to upgrade. Let me leave it as a challenge, that our current knowledge transfer systems is as yet inadequate to the task.

Saskatoon  Shines!

**SASKATOON-BASED CAMECO
EXPANDS LEADERSHIP ROLE IN
ONTARIO ELECTRICITY SUPPLY**

Cameco Corporation recently announced that it has signed a binding heads of agreement along with two Canadian partners, TransCanada PipeLines Limited and BPC Generation Infrastructure Trust, a trust established by Ontario Municipal Employees Retirement System, to purchase 79.8% of Bruce Power Limited Partnership from British Energy plc, which currently holds an 82.4% interest. The Power Workers' Union and The Society of Energy Professionals will obtain the remaining 2.6%. In addition, the consortium of Cameco, TransCanada and OMERS will acquire the 50% interest that BE holds in Huron Wind, Ontario's first commercial wind farm.

The agreement commits Cameco to purchase, for approximately \$198 million (subject to minor closing adjustments) an additional 16.6% interest in Bruce Power, bringing its total interest to 31.6%. The agreement protects Cameco's rights with respect to its existing 15% partnership interest, including limits on future capital and financial assurance requirements. Cameco also confirms its fuel supply management responsibility to Bruce Power has been retained.

Cameco will also provide \$75 million representing its one-third share of \$225 million in deferred rent payments to Ontario Power Generation Inc. (OPG) to be paid concurrent with the closing of the acquisition.

Upon closing, Cameco's total commitment in financial assurances is estimated to be approximately \$200 million, related to its share of the operating license from the Canadian Nuclear Safety Commission, the lease with OPG and the power purchase agreements with large industrial customers.

"We have been very pleased with our initial 15% investment in Bruce Power and we have worked very hard to build, with our partners, this made-in-Canada solution," said Bernard Michel, chair and chief executive officer of Cameco. *"We are delighted to be associated in this transaction with TransCanada and OMERS, two highly respected, large capitalization investors whose participation unquestionably strengthens Bruce Power."*

"With this transaction, Bruce Power will find itself with financially strong owners and the management team will be able to dedicate its full attention to the continuing improvement of the power station performance and to the restart of the two Bruce A reactors," said Michel. Subject to regulatory approvals, the anticipated restart of Bruce A reactors remains on schedule to meet Ontario's peak summer demand and is estimated to cost about \$400 million.

**SASKATOON SEEKS TO BECOME
"BUSINESS FRIENDLIEST
CITY IN CANADA"**

As a direct result of the efforts of the Combined Business Group, City Council passed a motion on December 16, 2002 that "By 2006, Saskatoon and region will be the Business Friendliest City in Canada, which nurtures excellence, innovation and creativity."

Council's endorsement of this declaration will serve as a powerful message to current and prospective investors in Saskatoon to accelerate their investment and job creation initiatives in our city, according to the group.

The Combined Business Group is comprised of various local business associations, including the Saskatoon and District Chamber of Commerce, the Broadway and Riversdale Business Improvement Districts, the Eighth Street, Sutherland and North Saskatoon Business Associations, The Partnership, Saskatoon Regional Economic Development Authority Inc., Saskatoon Construction Association, Saskatoon and Region Home Builder's Association and the Saskatoon Real Estate Board.

In pursuit of the goal to become the Business Friendliest city in Canada, the Saskatoon and District Chamber of Commerce has created a "Business Friendliness Index" survey, which it plans to distribute to its membership over the next few weeks. The survey will measure perceptions and attitudes of local business people regarding the products and services offered by the City of Saskatoon.

Similar surveys will be conducted in a variety of cities across Canada by other Chambers of Commerce, and results will be shared for benchmarking purposes.

Please provide your input and complete the survey when it is distributed.

TELUS SELECTS CRITICAL TELECOM'S FIBERLINK TECHNOLOGY

Critical Telecom, a leading developer of broadband technologies, recently announced that TELUS Corporation has selected Critical Telecom's FiberLINK solution for expanding the footprint of TELUS' ADSL based service capabilities beyond the reach of existing central offices. Critical Telecom and TELUS recently concluded a contract for deployment of the FiberLINK technology. FiberLINK will allow TELUS to extend its Velocity® high speed Internet service to meet the increasing demand for broadband service by residential and business subscribers in Alberta and British Columbia.

"We have done a comprehensive analysis and evaluation of the FiberLINK technology and are very pleased with the results. The simplicity of the solution in utilizing our existing infrastructure in the outside plant is a major benefit of this technology" said Girish Pathak, Chief Technology Officer, TELUS.

"We are very pleased FiberLINK has been chosen by TELUS as a key solution for their extended range DSL program. Our solution allows TELUS to offer each subscriber full rate ADSL bandwidth in support of next generation services over TELUS' access network. We look forward to working closely with TELUS to deploy FiberLINK" said Oliver Cruder, President and Chief Executive Officer, Critical Telecom.

Critical Telecom's FiberLINK technology enables service providers to deliver full rate ADSL beyond the reach of existing central offices. The solution can be deployed much more rapidly and cheaper than conventional remote Digital Subscriber Line Access Multiplexers (DSLAMs) utilizing a service provider's current infrastructure in the outside plant.

Critical Telecom Corp. is a technology company focused on providing last mile access solutions for the telecommunications industry. Critical Telecom is a member of TRILabs, which is Canada's leading research consortium in information and communications technology.

TELUS Corporation (TSE: T, T.A; NYSE: TU) is one of Canada's leading telecommunications companies, providing a full range of telecommunications products and services that connect Canadians to the world. The company is the leading service provider in Western Canada and provides data, Internet Protocol, voice and wireless services to Central and Eastern Canada.

The Saskatoon Board of Education is taking a stand against questionable new financial procedures that download provincial debt for building schools onto local school boards.

After refusing to adopt resolutions that would accept the new financing procedures at a meeting recently, the Board is seeking an urgent meeting with Premier Lorne Calvert, Finance Minister Eric Cline and Learning Minister Jim Melenchuk. The Board has a clear message for the Ministers: The new approach could devastate the School Board's financial position and its ability to borrow money for future school construction.

"If Enron has taught us anything it's that boards must be vigilant in safeguarding the integrity of accounting and financial procedures," said Board Chair Gordon Wyant. "We're taking a stand against new accounting procedures that fundamentally change how debt for school construction is reported. This new procedure allows the provincial government to download provincial debt onto local school divisions."

Wyant acknowledged some school divisions are holding their noses and going along with the new procedure, but added: "That doesn't make it right. There's a need to shine a bright light on a questionable financial procedure." In fact, the Saskatoon Board of Education is aware the Saskatchewan School Trustees Association has asked the Provincial Auditor to provide an opinion on whether the new procedure meets acceptable accounting standards.

The Saskatoon Board of Education is particularly annoyed that, because of the new procedure, the provincial government is attempting to change the rules in midstream for construction projects at Montgomery and Lakeridge Schools. The province had previously committed to pay their portion of the projects and now it want to use the new system, and move the entire debt for the two projects to the School Board's books.

Assuming the disagreement over Montgomery and Lakeridge projects can be resolved, the Board believes there's still a big problem with the contract the Province is trying to force on the Board for future school construction.

"The contract the Province is forcing on us isn't a real contract," Wyant said. "The province can pull out of the deal anytime it wants. That means a new school could be built and the provincial government could pull the mortgage before the project is paid for. Local taxpayers end up on the hook."

The dispute revolves around the new Educational Infrastructure Financing Corporation formed in April 2002 to finance the provincial government's share of capital projects in the education sector. The new accounting procedures being proposed by the province will slide the provincial portion of debt for building schools from the Province's books to the School Board's books. Overnight, the School Board's debt appears to skyrocket and the Board's balance sheet looks much worse than it really is.

"That could potentially hurt the Board's future borrowing capacity and our ability to take on projects such as a new collegiate," Wyant said. "Every school board in Saskatchewan should be worried."

A Tale of Two Economies

The disparity between Canadian and U.S. economic performance continues. Employment numbers released December 6 by Statistics Canada indicate that employment rose, on net, by 42,300 in November, continuing the upward trend that began at the start of 2002. All of the gains were in full-time positions. So far in 2002, job growth has been particularly strong in part-time positions (up 7.7% in the first 11 months of 2002 compared to the same period a year ago) but full-time employment has also increased (up 2.4%). The unemployment rate in November stood at 7.5% down from 7.6% in October and 7.9% at the start of the year. In the first 11 months of this year, employment has increased by a stunning 501,600 positions. Once the final numbers are in, 2002 should prove to be a record year for employment growth in Canada. These numbers bode well for consumer confidence & income heading into the Christmas season.

In sharp contrast to the very positive news coming out of Canada, the Bureau of Labor Statistics of the U.S. Department of Labor reported on December 6 that the number of payrolls (outside the agricultural sector) shrank by 40,000 in the month of November. The unemployment rate rose to 6 per cent in November, up from 5.7 per cent in October and 5.6 per cent at the start of the year. November's jobless rate (which was matched back in April) was the highest since July 1994, when the rate topped 6.1 per cent. Since the start of 2002, nonfarm employment has remained virtually flat in the U.S. Therefore, in the U.S., it has been a jobless recovery with productivity growth driving economic gains.

Impact of Employment Insurance Premium Reductions

On November 28, Deputy Prime Minister and Finance Minister John Manley and Human Resources Development Minister Jane Stewart announced that EI premiums will be reduced by 10 cents to \$2.10 per \$100 of insurable earning for employees and by 14 cents to \$2.94 for employers in 2003. The Canadian Chamber has been a very active advocate for ongoing reductions in Employment Insurance (EI) premiums. Human Resources and Development Canada (HRDC) estimates the cumulative surplus in the EI account at approximately \$42 billion at the end of 2002. The Canadian Chamber recognizes that the federal government must maintain a surplus in order to prevent premium increases in the event of an economic downturn. However, the Canadian Chamber believes that a \$5 billion dollar surplus is sufficient to sustain the EI program through a recession similar to the recession of the early 1990s.

It is important to note that the large surplus in the EI Account has encouraged the use of EI money to fund non-insurance uses (for

example, parental leave coverage) and has fueled demands for new benefit schemes. In our view, these non-insurance uses would divert the EI program further from its initial goal, that being, to provide insurance against unintended unemployment. In light of this, the Canadian Chamber believes that premiums should be reduced further in order to get to the break-even level quickly (i.e. the level where premiums collected equal the amount required to fund program payouts). HRDC has estimated that the 'break-even' premium rate for 2003 at \$1.91 per \$100 of insurable earnings (not accounting for interest credits on the EI reserve).

The Canadian Chamber had urged the government to reduce the rate by 20 cents, double the amount announced as the total collected by the government continues to be far in excess of disbursements, with some of the surplus used to fund non-related government spending initiatives.

The CPP/QPP premium rate will increase from \$4.70 per \$100 of pensionable earnings in 2002, to \$4.95 in 2003. Maximum annual premium will rise from \$1,673 to \$1,802 or by \$129. This is for both employers and employees.

As a result, overall payroll taxes will increase for Canadian employees and employers in 2003.

- EI premium rate will fall from \$2.20 per \$100 of insurable earnings in 2002 to \$2.10 in 2003 for employees. EI premium rate will fall from \$3.08 per \$100 of insurable earnings in 2002 to \$2.94 in 2003 for employers.
- The maximum annual EI premium for employees will fall from \$858 in 2002 to \$819 in 2003 or by \$39. The maximum annual EI premium for employers will fall from \$1,201 in 2002 to \$1,147 in 2003 or by \$54.
- The bottom line: Employees paying maximum annual premiums will pay, on net, \$90 more in payroll taxes in 2003 than 2002. Employers will pay, on net \$75 more in payroll taxes per employee making the maximum insurable earnings.

There is no doubt that payroll taxes adversely affect employment and introduce other labour market distortions. An increase in average payroll taxes paid by employers results in an increase in real wage costs to employers, a drop in real wages received by employees, and a drop in the level of employment. If we are to grow the economy on a long-term sustainable basis, improve productivity growth and increase the standard of living of Canadians we must keep overall payroll taxes from increasing significantly. EI premium rates must come down to help offset rising CPP premiums if the overall negative impact of higher payroll taxes on job creation is to be mitigated.

BUSINESS VIEW

NEW AG COMMITTEE CO-CHAIR ANNOUNCED

Joanne Thompson, Chair of the Saskatoon and District Chamber of Commerce Agribusiness Development Committee, is pleased to announce the appointment of Lorne Hadley as Committee Co-Chair.

Lorne Hadley, PAg., was raised on a family farm near Landis, Saskatchewan where he maintains an interest. He graduated from the University of Saskatchewan with a Bachelor of Science in Agriculture in 1984.

In eleven plus years with United Grain Growers Limited (UGG), Lorne served in a series of progressively more challenging positions. He was Area Sales Manager during the launch of the Proven Seed brand of products in Saskatchewan. As UGG Regional Manager, Saskatoon, he guided a major capital renewal strategy, which included several new builds, along with the redeployment of existing facilities and staff to achieve optimum results.

In July 2000, Lorne began a new venture as agricultural management consultant in Saskatoon. In this role he has been most active in the seed and farm supply industries. Beginning in April of 2001 he has been managing a seed industry agency, Canadian Plant Technology Agency. The CPTA is an action agency, is used by the seed industry to Plant Breeders Rights and other intellectual property rights.

Lorne sees a vast, untapped potential in value-added agriculture in Saskatchewan. Saskatoon, in particular, is the focus of many great research and development ideas. Matching these ideas with dynamic people will create a more prosperous agri-business sector in Saskatoon.

The vision of the Agribusiness Development Committee is for Saskatoon and district to be the premier agri-business communities in Saskatchewan and in Canada, and it's mission is to promote agri-business development in our communities.
